DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claims 35-40 are rejected under 35 U.S.C. 102(e) as being anticipated by Robinson et al. (U.S. Patent No. 6570867 B1).

- With respect to claims 35, and 37, Robinson discloses an apparatus for discovering logical links associated with network devices comprising:

a network management system (Fig. 11) comprising:

a database of managed network devices (22 in Fig. 11 and Fig. 10 shows the DB manager

46);

a database of logical links associated with the managed network devices (25 in Fig. 11 with storing paths);

a network communications system for sending messages to managed network devices and receiving messages from the managed network devices (e.g. data collector 21 to send and receive message from NE 24);

a message analysis system for determining local interface address information and next neighbor address information from messages received from the managed network devices (e.g. the server 22 analysis the paths).

- With respect to claim 36, Robinson further comprises a logical link display for displaying the logical links (e.g. GUI 23 in Fig. 5).

- With respect to claim 38, Robinson discloses a logical link information comparison system for comparing local interface address information and next neighbor address information obtained from messages received by from the managed network devices with endpoint information for the logical links stored in the logical links database (block 60 in Fig. 5).

- With respect to claim 39, Robinson discloses wherein the first and second messages comprise messages using the SNMP protocol (col. 18, lines 23-24; col. 3, lines 2-4).

- With respect to claim 40, Robinson teaches a managed network device identification system for identifying managed network devices associated with the next neighbor address information received from the managed network devices (e.g. block 55, 56 in Fig. 5).
